

RESEARCH FESTIVAL 2026 - PRESENTER BIO

Clare Pettit MSc
Lecturer at UCM

Presenting: How is AI currently being used within education and what impact it may have for both teaching and learning at UCM.

I am a Lecturer in Computing and IT at University College Isle of Man (UCM), where I teach across a range of digital and technology-focused modules, from IT Support to Games Development. I have recently graduated with an MSc in Emerging Technology through the Work Based Integrated Studies (WBIS) programme at UCM and the University of Chester.

My academic interests centre on emerging technologies and the evolving relationship between technology and education. Through both my teaching and research, I have developed an interest in how new technologies can enhance learning experiences and equip students with the skills required for an increasingly technology-driven workplace
